

Complete Summary

TITLE

Cervical cancer detection - screening Pap tests: percent of enrollees who had at least one Pap test in the measure look-back period (MEDDIC-MS).

SOURCE(S)

Department of Health and Family Services, Division of Health Care Financing, Bureau of Managed Health Care Programs. MEDDIC-MS. Medicaid encounter data driven improvement core measure set. Madison (WI): State of Wisconsin; 2003 Jan 1. 47 p.

Brief Abstract

DESCRIPTION

This measure tracks the rate of provision of cervical/uterine cancer and human papilloma virus (HPV) detection services to women in Medicaid/BadgerCare by age cohort.

RATIONALE

The United States Preventive Services Task Force (USPSTF) found good evidence from multiple observational studies that screening with cervical cytology (Papanicolaou [Pap] smears) reduces the incidence of and mortality from cervical cancer. Direct evidence to determine the optimal starting and stopping age and interval for screening is limited. Indirect evidence suggests most of the benefit can be obtained by beginning screening within 3 years of onset of sexual activity or age 21 (whichever comes first) and screening at least every three years. The USPSTF concludes that the benefits of screening substantially outweigh potential harms.

PRIMARY CLINICAL COMPONENT

Cervical/uterine cancer; human papilloma virus (HPV); Papanicolaou (Pap) smear

DENOMINATOR DESCRIPTION

The number of women age 18 to 65 years continuously enrolled with the same health maintenance organization (HMO) for at least ten months (304 days) immediately prior to the measure end date with no more than one gap in enrollment of not more than 45 days. The enrollee must have a total of not less than 259 enrolled days in the look-back period (see the related "Denominator Inclusions/Exclusions" field in the Complete Summary).

NUMERATOR DESCRIPTION

The number of unduplicated enrollees from the denominator for each age cohort who had at least one Papanicolaou (Pap) test in the measure look-back period, based on current and previous (if applicable) health maintenance organization (HMO) claims/encounter data and fee-for-service (FFS) Medicaid Evaluation & Decision Support (MEDS) data

CASE FINDING

Both users and nonusers of care

DESCRIPTION OF CASE FINDING

Women age 18 to 65 years continuously enrolled with the same health maintenance organization (HMO) for at least ten months (304 days) immediately prior to the measure end date* with no more than one gap in enrollment of not more than 45 days. The enrollee must have a total of not less than 259 enrolled days in the look-back period.**

*Measure end date: The last date by which measured services can be rendered to be included in the measure numerator. This is the date from which the look-back period begins.

**Measure look-back period: 12 months (365 days) from the measure end date.

Measure data extraction date: The date(s) determined by the department for extraction of data from the data warehouse for the purposes of reporting the measure. This will be at least 182 days after the measure end date.

DENOMINATOR SAMPLING FRAME

Enrollees or beneficiaries

DENOMINATOR (INDEX) EVENT

Patient Characteristic

DENOMINATOR INCLUSIONS/EXCLUSIONS

Inclusions

The number of women age 18 to 65 years continuously enrolled with the same health maintenance organization (HMO) for at least ten months (304 days) immediately prior to the measure end date with no more than one gap in enrollment of not more than 45 days. The enrollee must have a total of not less than 259 enrolled days in the look-back period.

Exclusions

Exclude from the denominator enrollees with a Papanicolaou (Pap) test encounter as defined in the clinical criteria* in the 24 months prior to the look-back period, from any source, and exclude from the denominator enrollees with a history of total abdominal, vaginal, or radical hysterectomy.**

*Refer to the original measure documentation for International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), Current Procedure Terminology (CPT-4/2001), and Revenue codes.

**Refer to the original measure documentation for ICD-9-CM and CPT-2001 codes.

NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions

The number of unduplicated enrollees from the denominator for each age cohort who had at least one Papanicolaou (Pap) test in the measure look-back period,* based on current and previous (if applicable) health maintenance organization (HMO) claims/encounter data and fee-for-service (FFS) Medicaid Evaluation & Decision Support (MEDS) data

Refer to the original measure documentation for International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM), Current Procedure Terminology (CPT-4/2001), and Revenue codes.

*Since the measure look-back period is 365 days from the measure end date and women with an encounter for a Pap test in the 24 months prior to the look-back period are excluded from the denominator, the measure assesses the percentage of enrolled women who received a Pap test in a three-year period.
