Brief Abstract

Description
This measure is used to assess the percentage of patients discharged from the critical care department with a main diagnosis of ST-segment elevation acute coronary syndrome (STE-ACS) who died.

Rationale
The aim of intensive care medicine is to provide critical patients with the healthcare that they need, ensuring the quality and safety of care. Intensive care medicine is one of the principal components of modern healthcare systems. There is an increasing demand for this resource, which involves high costs.

The quality of care has gradually come to be the central focus of healthcare, and in recent years patient safety has come to represent one of the key aspects of quality. In the case of intensive care medicine, this interest in quality is even more evident, not only because of its social and economic impact, but also because some of the dimensions involved in the quality of care of critical patients take on greater importance: critical patients are more vulnerable, access to critical care is more limited so efforts to
Although mortality from acute coronary syndrome (ACS) depends on many factors, it is associated with the levels of treatment that the patient receives, so we continue to consider this an indicator of the quality of care.

Evidence for Rationale

Primary Health Components

Cardiac care; ST-segment elevation acute coronary syndrome (STE-ACS); hospital mortality

Denominator Description

Number of patients discharged from the intensive care unit (ICU) with a main diagnosis of ST-segment elevation acute coronary syndrome (STE-ACS) (see the related "Denominator Inclusions/Exclusions" field)

Numerator Description

Number of patients discharged from the critical care department with a main diagnosis of ST-segment elevation acute coronary syndrome (STE-ACS) who died (see the related "Numerator Inclusions/Exclusions" field)

Evidence Supporting the Measure

Type of Evidence Supporting the Criterion of Quality for the Measure

A formal consensus procedure, involving experts in relevant clinical, methodological, public health and organizational sciences

One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal
Additional Information Supporting Need for the Measure
Unspecified

Extent of Measure Testing
Unspecified

State of Use of the Measure

State of Use
Current routine use

Current Use
not defined yet

Application of the Measure in its Current Use

Measurement Setting
Hospital Inpatient
Intensive Care Units

Professionals Involved in Delivery of Health Services
not defined yet

Least Aggregated Level of Services Delivery Addressed
Single Health Care Delivery or Public Health Organizations

Statement of Acceptable Minimum Sample Size
Unspecified

Target Population Age
Age greater than or equal to 18 years

Target Population Gender
Either male or female

Denominator (Index) Event or Characteristic
Clinical Condition
Institutionalization

Denominator Time Window
not defined yet

Denominator Inclusions/Exclusions
Inclusions
Number of patients discharged from the intensive care unit (ICU) with a main diagnosis of ST-segment elevation acute coronary syndrome (STE-ACS)

Population: All patients with a main diagnosis of STE-ACS discharged from the critical care department (to another ward, to their homes, or due to death) during the period reviewed.

Exclusions

- Patients transferred to another hospital (due to difficulties in follow-up)
- Patients with STE-ACS identified as a secondary diagnosis because the literature underlying the standard considers only patients with a main diagnosis of STE-ACS

Exclusions/Exceptions

not defined yet

Numerator Inclusions/Exclusions

Inclusions

Number of patients discharged from the critical care department with a main diagnosis of ST-segment elevation acute coronary syndrome (STE-ACS) who died

Note: Death should be considered in-hospital whether it occurs in the intensive care unit (ICU) or in any other department after discharge from the ICU.

Exclusions

Unspecified

Numerator Search Strategy

Institutionalization
